

The EUTR four years in Autumn 2017

Funded by the LIFE programme of the European Union and UK Aid from the UK government. The European Commission support for the production of this publication does not constitute endorsement of the contents which reflects the views only of the authors, and the Commission cannot be held responsible for any use which may be made of the information contained therein. This material has been funded by UK aid from the UK government; however the views expressed do not necessarily reflect the UK government's official policies.

How has the EUTR developed over the last four years?

- Competent Authority enforcement
- NGO campaigns
- Company implementation

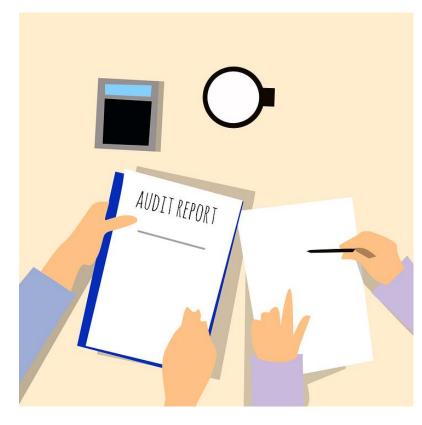

Enforcement

- Inconsistent across member states
- Some competent authorities have been more active – e.g. Denmark, UK and Germany.
- Audits are taking place in most of the member states.
- Competence of Competent Authorities are growing.

- UK CA microscopic wood anatomy testing project on Chinese plywood.
- Skogsstyrelsen, the Swedish CA, fined Almtra Nordic 17,000 Swedish krona (approximately 1800 EUR) <u>Teak from Myanmar</u> (October 2016)
- Danish CA <u>requires 7 Operators to improve due diligence on Burmese Teak</u> (more inspections in BE, IT, NL, SP, UK)
- Dutch CA sanctions <u>Fibois BV over purchase of Azobe (Lophira alata)</u> from Compagnie de Commerce et de Transport (CCT) in Cameroon upheld by Dutch court (potential fine for future issues = 1800 EUR / m³) (May 2017)
- German court rules that <u>German CA (BLE) was correct to confiscate Wenge</u> <u>timber</u> imported in 2013 from DRC, due to falsified documents.

In February 2015, the UK CA released a report on the *Chinese Plywood Enforcement Project.*

Why Chinese plywood?

- High value veneer & low value core
- Complex supply chains
- Cheap
- High risk of corruption
- Evidence of illegal timber being imported into China

EUTR: Plywood imported from China

Nicolas Pillet & Michael Sawyer Project prepared for DEFRA February 2015

14 out of 16 companies supplied an insufficient due diligence procedure (88%)

Further issues arose with testing...

Company	Face declaration	Face tested	Core declaration	Core tested
1	Palaquium	Palaquium	Eucalyptus	Eucalyptus
2	Betula	Betula	Eucalyptus	Poplar
				Kedongdong
				Pine
3	Sapeli	Sapeli	Poplar	Poplar
				Elm
4	Palaquium	Palaquium	Poplar	Poplar
			Eucalyptus	Kasai

				Red Meranti
12	Eucalyptus	Bitangor	Eucalyptus	Eucalyptus
				Poplar
13	Bitangor	Bitangor	Poplar	Kasai
				Medang

 "Testing has become an essential tool in EUTR projects as it allows... to establish if a potential offence has been committed."

UK CA

 A due diligence system cannot be considered appropriate if the product on which it focuses does not contain the species that researched and risk assessed within it.

DNA analysis to identify origin

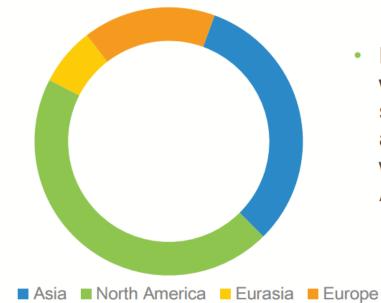

Double Helix

The White Oak Lottery: UK Mystery Sh

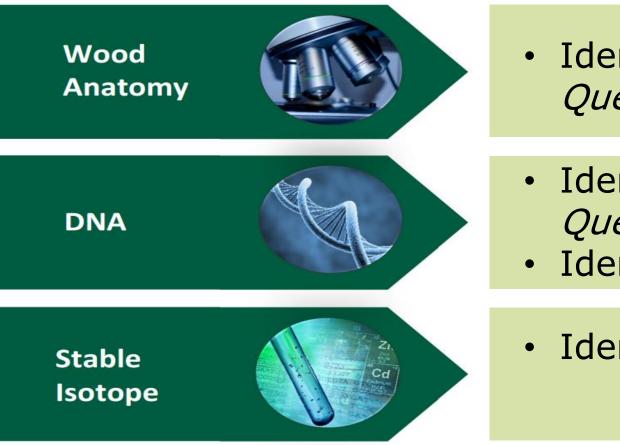

Overall results, all samples (by continent of origin)

Actual origin, % of white oak samples

 More than half of white oak product samples declared as "U.S. white oak" were not from North America at all

- Identify species to genus level (e.g. *Quercus* spp.)
- Identify species to species level (e.g. *Quercus robur*)
- Identify geographic origin
- Identify geographic origin

When to test?

- When new product lines are introduced
- When there are concerns about supplier claims
- When products contain different components or species
- When a company in the supply chain is changed
- When testing by 3rd parties has shown species/ origin differs from your claims

Timber testing

Timber Testing Techniques

A guide to laboratory techniques to determine species and origin of timber products

NEPCon

Thematic article series no. 1 Published February 2017

Developed by MEPCon under the project "Supporting Legal Timber Trade" funded by the EU LIPE programme and UK Aid from the UK government.

What are the penalties in the UK?

- A person found guilty of an offence is liable:
- (a) on summary conviction; Fine up to £5,000 or imprisonment up to 3 months, or both.
- (b) on conviction on indictment; (unlimited) fine or imprisonment up to two years, or both.

Clarification from the CA:

"the offence may be applied to each individual piece of timber within a consignment"

What are the penalties in Germany?

- §7
- (5) In the cases referred to in paragraphs 1 and 2, paragraph 3 (2) and (3) and paragraph 4 (1), the administrative offense may be punishable by a fine of up to 50,000 euro and, in other cases, a fine of up to EUR 20,000.

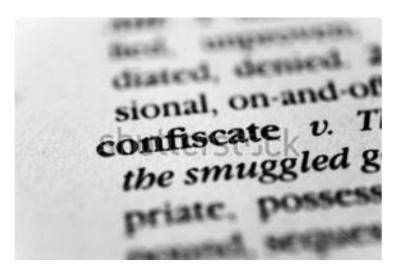

§8.

- (1) A penalty of up to one year or a fine will be imposed on anyone who:
- 1. commits a deliberate act referred to in Article 7 (1) or (2) (1) and thereby obtains from a gross self-interest for himself or another asset advantage of a large scale;
- 2. a deliberate act referred to in Article 7 (1) or (2) (1).
- (2) The attempt is punishable.

Not official translation

Confiscation of supplies and disrupted supply flow

Loss of buyers and brand damage

Perhaps more importantly...

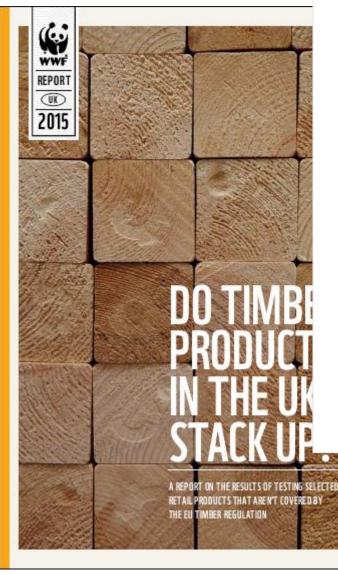

NGO Campaigns

- Raising profile of high risk cases in various countries
- Targeting specific companies
- Putting information in the public domain which Operators should consider as part of their risk assessment
- Highlighting the dangers on relying on documents alone

Thanks for all your questions

Thanks for being the #VoiceOfTheForest - we were overwhelmed your thousands of questions to Fender and Oak Furniture Land - proof of what we already knew - that you all care strongly about the connection between the wood-based products you buy and the forests they come from.

The good news is that both companies are now taking us more seriously. Oak Furniture Land has even agreed to meet with us. But we have a long way for both companies to go before we are satisfied. Rest assured we will continue to ask both companies to take urgent action. Find out how you can help below.

Oak Furniture Land's response

They answered your questions with assurances that the wood in all their products is legally sourced (see below).

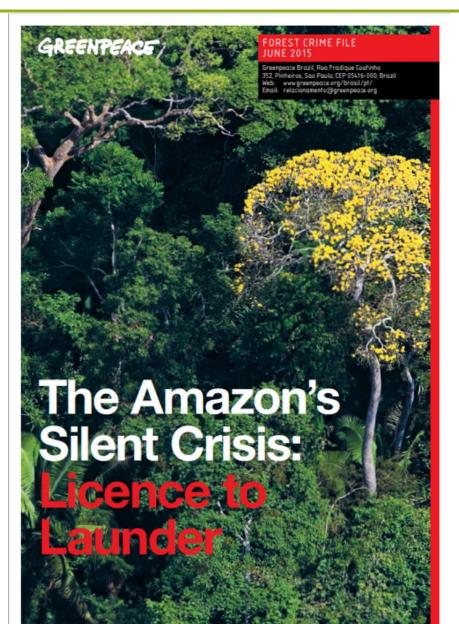

However there is no mention of whether they source their wood from well-managed forests.

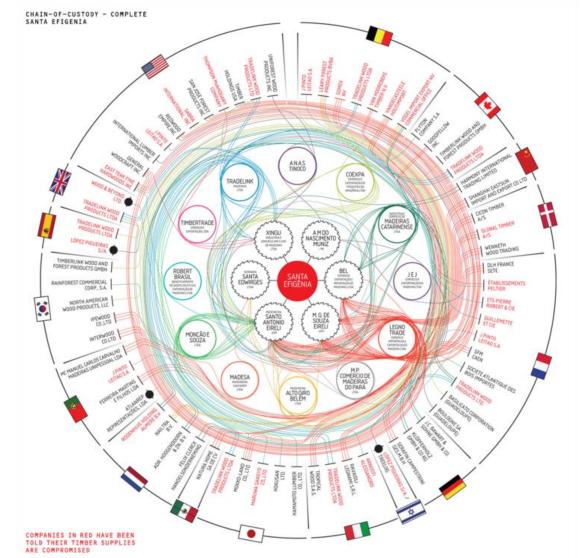

Fender's response

Fender did not answer your individual questions (see below for the list we sent them), but sent us a statement and said:

"....yes; Fender's wood sourcing practices include extensive processes and protocols that ensure its products are legally compliant and responsibly sourced."

MACC freezes 375 accounts worth over RM560mil with links to illegal logging in Sarawak

BY SHARON LING

Company Responses

Scenario

- Large furniture retailer based in Germany, Austria, Luxembourg
- Visited by German Competent Authority in 2014
- CA stated that inadequate due diligence information was provided to justify low risk conclusion for two supply chains
- The company immediately halted purchases from both supply chains whilst investigation was ongoing

Supply chain verification

NEPCon assessment of two supply chains:

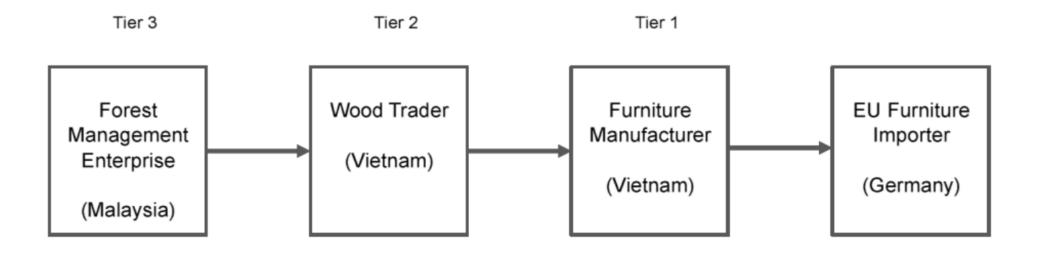

- 1) Teak furniture from factory in Vietnam made from plantation teak from Costa Rica; and
- 2) Acacia furniture from factory in Vietnam made from timber from Malaysia.

Desk based review of access to information, risk assessment and justification.

Step 1: supply chain mapping

Step 2: collect and review supply chain documentation

- Single certified source \rightarrow *Acacia mangium* plantation
- Certification at forest level (FM) and all along the supply chain (CoC) – 3rd party verified
- Access to information found to be good:
 - Sales and purchase agreement for land
 - Forest Management Plan
 - Clarifying letter from FD regarding payment of royalties
 - Transport documents & invoices
 - Import/export permits
 - Certification reports
 - Business licences

Step 3: review due diligence system

- Risk assessment and mitigation procedures generally robust
- Weak procedures describing risk assessment of mixing in supply chain

→Company should clarify and document how supply chain documentation and Chain of Custody (CoC) certification is used to justify low risk

 Isotope testing to verify origin and microscopic testing to verify species

Conclusions

- NEPCon concluded low risk of illegal logging, trade and transport for both supply chains
- Only weakness was <u>written</u> risk assessment procedures
- Species and origin testing confirmed conclusions

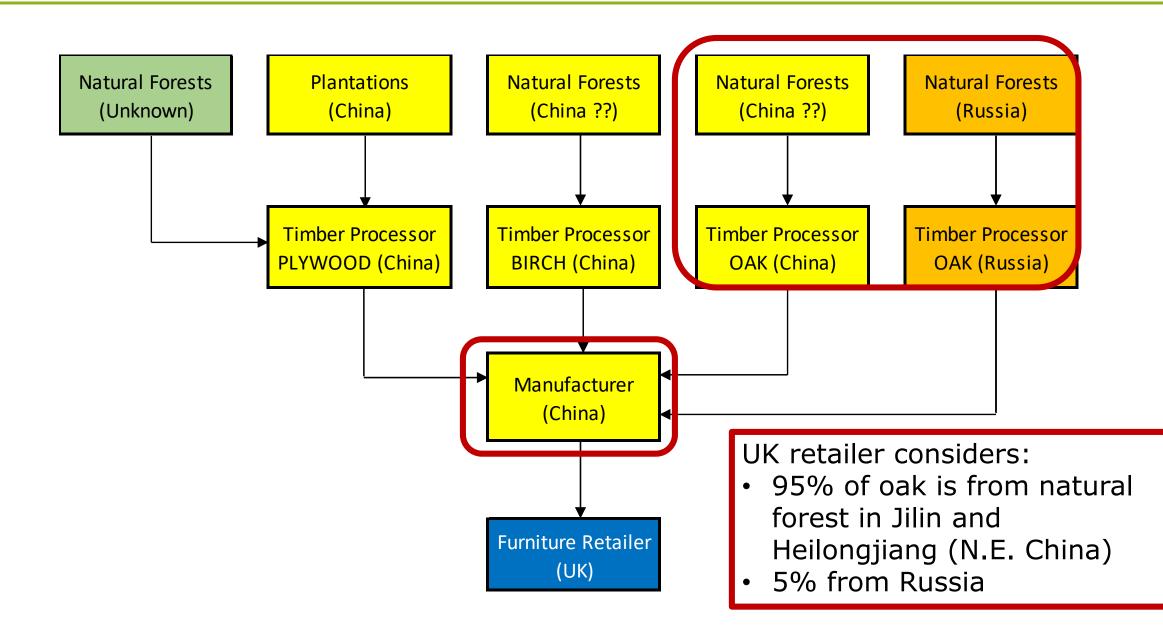

Scenario

- Large furniture retailer based in the UK deals in Oak and birch furniture which they import to the EU
- Have 4 suppliers 2 of which are regular suppliers with factories in China and Thailand.
- Were visited by UK CA

 \rightarrow following the visit, they were issued with a **warning** letter, requesting information on the DDS they had in place for the oak furniture.

Contacted NEPCon to conduct an evaluation of their DDS

Evaluation findings: Mongolian Oak (*Quercus mongolica*)

- Insufficient information in order to confirm Chinese origin. High probability of (illegal) oak supply from Russian Far East.
- 2. Document integrity in serious doubt:
 - VALIDITY: not all documents were valid or issued by the competent authority.
 - COMPLETENESS: missing, erroneous and conflicting information.
 - RELATION TO MATERIAL: connection between the documents and the material throughout supply chain was not clear.
- 3. Russian supply chain documentation highly suspect.

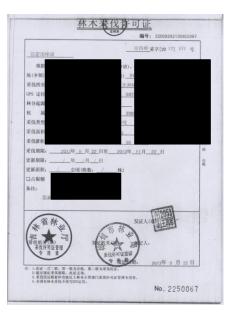

Documentation on Mongolian oak (China)

Heilongjiang province

- No supply chain documentation provided.
- Heilongjiang implemented a commercial logging ban in state-owned forests effective April 2014 (so supply, at volumes stated, is suspicious).

Jillin province

- Only Harvest Permits with issue dates from 2012 & 2013 were available → question regarding their applicability to the products purchased.
- Available permits for volumes insignificant to size of supply.
- Permits specify the type of forest as simply 'broad leaved', further lowering the volumes of oak which could possibly be harvested under the permits.

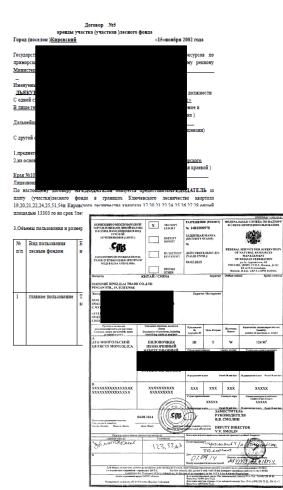

Documentation on Mongolian oak (Russia)

Russian-sourced Oak

- Oak Harvest contract dated 2002 on the 1st page & states a validity period of 5yrs. Later in the document, it states the validity is for 17yrs.
- Contract states composition as; 30% Spruce, 20% Birch, 20% Ash, 10% Elm &10% Aspen. This only sums to 90% and Oak is not specified.
- Harvesting permits for volumes insignificant to size of supply.
- Many spelling mistakes in some documents.
- CITÉS permit probably not related to supply chain (different companies named on the permit). (*Quercus mongolica* listed by Russia on CITES Annex III on 24th June 2014).

Risk mitigation recommendations

- Cease supplies from Chinese based supplier until appropriate long-term risk mitigation actions are put in place.
- Collection of additional information about product verification.
- Sourcing certified materials both major suppliers were FSC CoC certified and the opportunity to source certified material from them existed.
- Sourcing from low risk national/ sub-national regions e.g. France.
- Sourcing from Operators.

NEPCon

Broad agreement exists on how to mitigate risk of illegal timber from the Russian Far East

- 1. Request current, accurate documentation demonstrating legal origin. Do not rely solely on collecting such documents: ask probing questions of suppliers, conduct site visits, consult with local, well-informed stakeholders.
- 2. Purchase certified materials.
- **3. Establish rigorous legality confirmation systems** that include field verification, 3rd party auditing & stakeholder consultation.
- **4.** Conduct timber testing to determine that the species and origin match those claimed by suppliers.
- 5. If legality cannot be confirmed, avoid products made from hardwoods that could be of Russian Far East origin.

"*Is this enough?"* Wrong question!

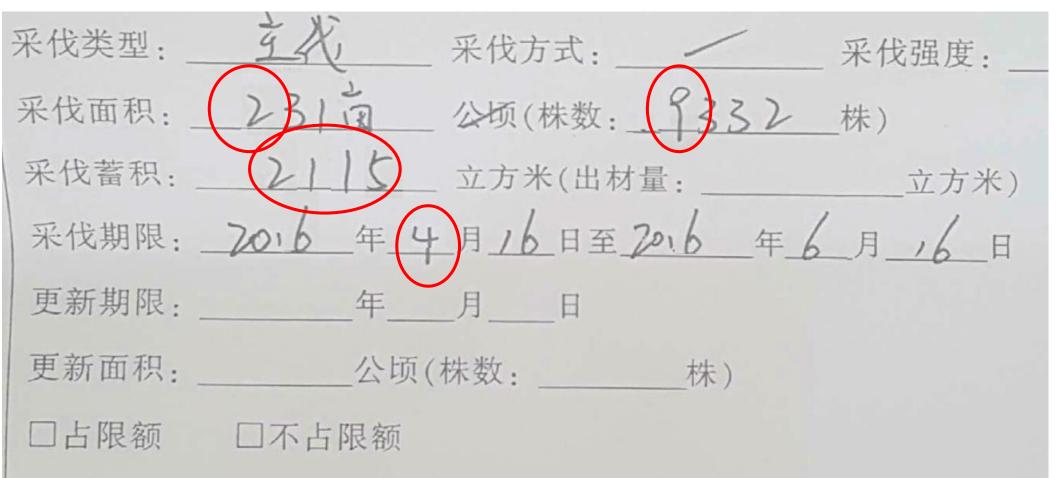

- 1. Relevance: What does the information tell you about risk of illegality?
- **2. Validity:** Is the information genuine?
- **3. Relatedness**: Does the information apply to *your* supply chain or shipment?

Documents

Quick quiz!

Checking for fake documents:

- Obvious mistakes
- Spelling mistakes and inconsistencies
- Formatting or text that's more blurry than the rest
- Check documents against an official database
- Check that information tallies across
- Use computer software to help check PDFs

Key challenge...corruption

From the Operators perspective:

- CA enforcement patchy but improving
- Enforcement and brand damage key driver of compliance
- Laboratory testing is a growing tool to verify legality claims
- NGOs are using the EUTR as leverage
- Access to supply chain information is key
- Evaluate documentation
- Lack of robust risk assessment is a still a weakness
